For 1985, the *Journal of Magnetism and Magnetic Materials* is scheduled to appear in 21 issues (7 volumes). The subscription price for 7 volumes is Dfl. 2254.00 (U.S. $830.00), postage and handling included. The Dutch Guilder price is definitive; the currency equivalent is for your guidance only.

Subscriptions should be sent to the publisher, *Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam*, or to any subscription agent or bookseller.
Journals are sent by surface delivery to all countries, except the following countries where SAL air delivery (Surface Airlifted Mail) is ensured: USA, Canada, Japan, Australia, New Zealand, The People's Republic of China, Israel, India, Brazil, Malaysia, Singapore, South Korea, Taiwan, Pakistan, Hong Kong, South Africa. Air mail rates for other countries are available upon request.
Claims for issues not received should be made within three months of publication, if they are to be honoured free of charge.

Elsevier Science Publishers B.V. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of 20 June 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25, also payable through the Center. (N.B. For review journals this fee is $0.25 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

INFORMATION TO CONTRIBUTORS

Aim and Scope

The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS provides an important forum for the disclosure and discussion of original contributions covering the whole spectrum of topics from basic magnetism to the technology and applications of magnetic materials. The journal encourages greater interaction between the basic and applied sub-disciplines of magnetism with short but comprehensive review articles, short notes and a separate Letters to the Editor section – in addition to the more traditional contributions.

Invitation to Authors

The editors invite contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Instructions to Authors are available from the publishers. There are no publication charges and 25 reprints will be provided free of charge, with additional reprints available from the publisher at their normal prices.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Contributions, written in English, should be sent in duplicate, preferably to one of the Editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case one copy plus the original figures should be sent simultaneously to A.J. Freeman. Submission of a paper will be taken to imply that it represents original work not previously published, that it is not being considered elsewhere for publication, and that if accepted for publication, it will not be published elsewhere in the same form, in any language, without the consent of the publisher.

All manuscripts will be refereed. They should be typed with double spacing, first copies (or clear Xerox copies thereof), with a wide margin. All pages should be numbered. Before mailing the manuscripts, please check the following points:

1. Title: The title should be chosen for its sufficient information content so that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. Abstract: The abstract of 100–150 words should contain all the substance of the methods and the results achieved, as well as keywords of the paper.
3. Address: The name(s) of the author(s) and the name and address of the institution where the research work has been done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
4. Figures: The drawings for the figures must be submitted on separate sheets, either as good sharp photoprints (glossy prints), drawn in black indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Each figure should have an Arabic number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Figures will be returned after publication of the article.
5. Formulae: Displayed formulae should be numbered and typed, or clearly written by hand. Vectors will be printed in boldface italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script. Special attention should be paid to characters that can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, z, Z, p, P, ρ (Greek rho), etc.
6. Tables: Tables should be typed on separate sheets. Each table should have a Roman number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
7. References: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples: For a book: D.J. Craik and R.S. Tebble, Ferromagnetism and Ferromagnetic Domains (North-Holland, Amsterdam, 1975) p. 160.
   For a paper in a journal: M.A. Ruderman and C. Kittel, Phys. Rev. 168 (1968) 679.
   For a paper contributed volume: A. Carrington, in: Magnetic Resonance and Radiofrequency Spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23. For an unpublished paper: B.N. Harmon, Ph. D. Thesis, Northwestern University, United States (1973).
8. Footnotes: As far as possible, footnotes should be avoided.
9. Set headings over to the left, with only the first letter capitalised.
   1. First-level text heading
   1.2. Second-level text heading
   1.2.3. Third-level text heading
10. Units: Metric units are preferred. Acceptable abbreviations of units are given in the Style Manual of the American Institute of Physics and similar publications.
11. Authors will receive page proofs (including figures) by airmail for correction, which must be returned to the publisher within three days of receipt. Please ensure that a full postal address is given on the first page of the typescript, so that proofs are not delayed in the post. Please note that corrections of other than printer's errors may be charged.
12. Reprints:The publisher will supply, free of charge, 25 reprints without covers for each paper. Additional reprints may be ordered by completing the appropriate form sent with proofs.

Handbook on the Physics and Chemistry of Rare Earths

edited by KARL A. GSCHNEIDNER, JR., *Ames Laboratory - US DOE and Iowa State University and* LEROY EYRING, *Arizona State University Tempe, AZ, U.S.A.*

COMMENT FROM THE PRESS:

"Highly experienced authors have written each review usually at a level suitable for advanced postgraduate students and research workers from a variety of fields. With the great richness of information involving references to other review articles written from different points of view, these books are an important reference source and should be on the shelves of most libraries".

Journal of Applied Crystallography

The rare earths play a unique role in science. These seventeen related elements afford a panoply of subtle variations deriving from the systematic development of their electronic configurations, allowing a test of theory with excellent resolution. In contrast they find widespread use even in the most mundane processes such as steel making, for polishing materials and gasoline cracking catalysts. In between are exotic uses such as TV screen phosphors, lasers, high strength premanent magnets and chemical probes.
This multi-volume handbook covers the entire rare earth field in an integrated manner. Each chapter is a comprehensive, up-to-date, critical review of a particular segment of the field. The work offers the researcher and graduate student alike, a complete and thorough coverage of this fascinating field.

Volumes previously published:

Volume 1

Metals
1978. 1st repr. 1982 xxiv + 894 p.
Price: US $180.75/Dfl. 425.00
ISBN 0-444-85020-1

Volume 2

Alloys and Intermetallics
1979. 1st repr. 1982 xiv + 620 p.
Price: US $134.00/Dfl. 315.00
ISBN 0-444-85021-x

Volume 3

Non-Metallic Compounds - I
1979. 1st repr. 1983 xiv + 664 p.
Price: US $138.25/Dfl. 325.00
ISBN 0-444-85215-8

Volume 4

Non-Metallic Compounds - II
1979. 1st repr. 1983 xiv + 602 p.
Price: US $127.25/Dfl. 300.00
ISBN 0-444-85216-6

Volume 5

1982. 1st reprint 1984 x + 702 p.
Price: US $157.50/Dfl. 370.00
ISBN 0-444-86375-3

Volume 6

1984. x + 574 pages
Price: US $124.00/Dfl. 335.00
ISBN 0-444-865926

Volume 7

1984. x + 584 p.
Price: US $124.00/Dfl. 335.00
ISBN 0-444-86851-8

Volume 8
